## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 17 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

3. There is no support for the claimed limitations of a substrate having a thinner portion at the corner portion, as recited in claim 17, in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

### ***Reasons for allowance***

4. Claims 15-16 and 18-21 are allowed.
5. The following is an examiner's statement of reasons for allowance:

Art Unit: 2811

Newman (5,455,456) appears to be the closest prior art reference. Newman teaches in figure 3 a semiconductor device comprising a semiconductor chip 308, a substrate 106, 202 on which the semiconductor chip is mounted, wherein the semiconductor device has side surfaces, each of which is flat and is made of at least an edge surface of the substrate and an edge surface of the resin, a pair of side surfaces make a corner portion, and the substrate is indented at the corner portion further inward. Newman differs from the claimed structure in not having edge surfaces of the substrate and the resin level with each other, and the substrate being indented at the corner portion further inward than a portion of the resin. Therefore, prior art do not teach or render obviousness the semiconductor structure, as claimed. The allowability at least in part resides in the above described structure having elements which are not disclosed in the prior art searched.

### ***Response to Arguments***

6. Applicant argues that there is support on page 25 (embodiment of figure 12) for the claimed limitations of a substrate having a thinner portion at the corner portion, as recited in claim 17.

Although the embodiment of figure 12 recites the claimed limitations of a substrate having a thinner portion at the corner portion, independent claim 15 recites

Art Unit: 2811

the limitations of the embodiment of figure 13. There is support for a device comprising the limitations of a substrate having a thinner portion at the corner portion, as recited in claim 17, which also includes all the limitations of the embodiment of figure 13, as recited in independent claim 15.

### ***Conclusion***

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
